DETAILED ACTION

1. The following is an examiner's statement of reasons for allowance:

The claimed invention consists of a first drive unit, second drive unit, ejector, working member and first and second transmission units. Specifically, the prior art of record fails to teach a product ejecting apparatus having the following.

In claim 27, "a first transmission unit connected to said first drive unit, rotatably and reciprocatably disposed, wherein operating of said first drive unit results in a rotation of said first transmission unit and operating of the said second drive unit results in a reciprocating movement; a second transmission unit rotatably and reciprocatably disposed, connected to said second drive unit, wherein operating of said second drive unit results in a reciprocating movement of said second transmission unit."

In claim 38, "a first transmission unit rotatably and reciprocatably disposed, wherein operating of said first drive means results in a rotation of said first transmission unit and operating of the said second drive means results in a reciprocating movement of said first transmission means, said first transmission means for transmitting power from said first drive means; a second transmission unit rotatably and reciprocatably disposed, wherein operating of said second drive means results in a rotation of said second transmission means and operating of said first drive means results in a reciprocating movement of said second transmission unit."

The closest prior art, Taniguchi, Heindl and Fujishiro, fail to teach the specific first and second transmission units.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
